

Bread Lab – Feed Session

Date: 5/21/2026 · **Ratio:** 1:6.7:6.7:1

Starter: 15g **Flour:** 100g **Water:** 100g **Sugar:** 15g

Initial pH: 5.7

pH Readings

Elapsed	pH	Temp	Note
144m	5.2	°	Moved to the proofbox. For next refresh, go for 1:2:1:0.2, or 15 g starter, 30 g flour, 15 g water, and 3 g sugar. Waaaay less sugar.
241m	4.4	79.0°	
404m	3.8	80.2°	Gemini told me not to look at the pH, only the rise. I guess I really diluted the yeast population when I refreshed prematurely, and this might take 18-24 hours to peak. I'd say we've about doubled but it still looks like it has room to go.
